# AirLink™ Indoor

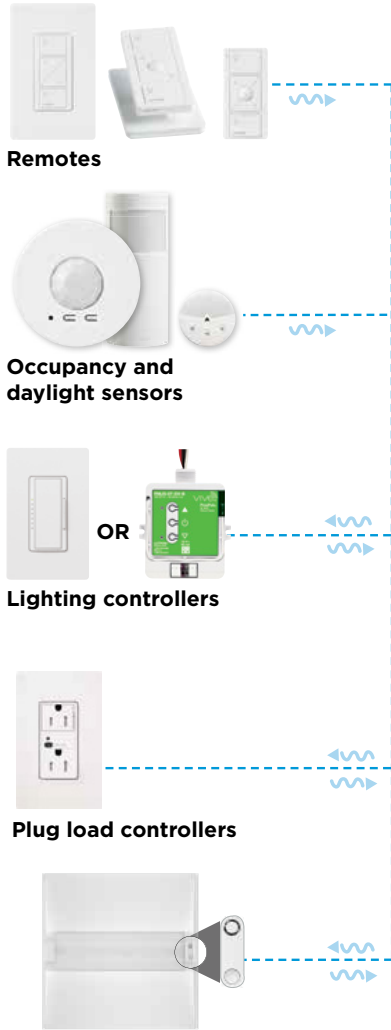

## Wireless Lighting Controls System

AirLink is the first wireless indoor lighting control system that is unbelievably simple to specify, install, use and sell. With no wiring, AirLink projects cut labor & risk by up to 90%. Not to mention, commissioning is now a visual process via web application, which makes it so easy, anyone can do it using their mobile device.

The AirLink system includes an array of wireless products: power packs, sensors, switches, controllers and hub, which gives users full control over their lighting system. We currently offer 5 AirLink-integrated troffers, but we also have a variety of AirLink-compatible fixtures as well.

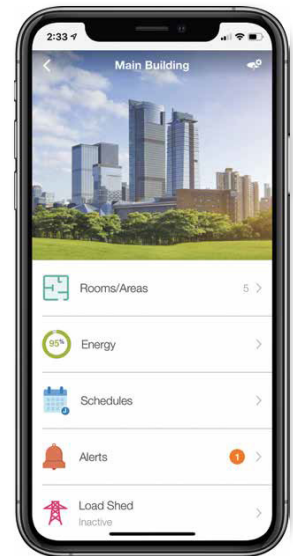

### Flexible, wireless controls and sensors for simple, code-compliant design

### Add wireless hubs for centralized control and integration (optional)

### Simple-to-use software
